

BUILDING REGISTRATION

- Gain access and control of all building and property information.

MainManager's Building Registration Management Module gives you a comprehensive overview of your property portfolio. This module collects all information in one place. Information registered by users is linked to objects in the building's hierarchical structure, such as buildings, places, rooms, technical systems, etc.

You get information on all components and an overview of the entire property portfolio, easily accessible in our building archive.

Objects in EG MainManager are categorized, which makes it possible to analyze and evaluate information and data across the portfolio. You can easily add documents, images and drawings. Using drag and drop, you can add object icons to 2D drawings and, for example, visualize the location of fire equipment. In other words, you can adapt our building archive exactly to your needs.

Right column
EG MainManager offers

- Standardized reports
- Multifunctional filtering of data
- Categorization of objects
- Analytical functions
- Visual presentation of data and information
- Easy access to a wide range of information
- Notification of changes to the subscription basis, new versions or master data changes
- QR codes
- External GIS systems and WMS layers
