

ORGANIZATION AND USERS

- Advanced user management

Create your own organizational structure and manage access control in one place. It is easy to get an overview of users, user roles and access levels for functions, etc.

EG MainManager makes it easy to get an overview of users, user roles and access levels. You can use drag and drop to change the access level to people, organizations and user roles. User access is managed in one place, and new users/employees can be given delegated access to websites according to their organization and user role.

EG MainManager user management:

- Organizational structure: You can create your own organizational structure, service partners and customers. This module is the key for all users and user history
- SingleSign-on: EGMainManager supports Single Sign-on via SAML and AD, which provides easier management of employee access
- Protection of personal data: EG MainManager supports the EU's General Data Protection Regulation (GDPR). All information registered in EG MainManager is owned and used by the customer, never by EG MainManager or third parties
- Integration to HR systems: EGMainManager supports integration to HR systems, which can save time for large and complex organizations

Digital check-in function with barcodes or QR codes:

Use the EG MainManager app with barcodes or QR codes at the organisation's locations - can also be used to register check-ins.
